

# The 'GT' Series - Brilliantly Simple

## The only sprayer for small to medium operators.

The GT series of sprayers are reliable, strong machines made specifically for smaller cropping areas & graziers. Designed & built with strength, simplicity & ease of use in mind the GT Sprayers feature a very simple plumbing design & layout with quality TeeJet and Arag components. Available in 1000lt to 3400lt tank sizes with the option of 10m, 12m, 15m & 18m Booms, the GT range offers the best value for money. With a long list of standard features the GT range assures you reliability, ease of use and are ready to spray when you are.

### The GT Range comes standard with the following features:

**Trailer:** Heavy duty chassis, walk-through platform covered with safetyperfr, handrail & steps both sides. The pull has a 35mm ball end or 50m ball coupling. A swingaway jockey wheel is standard. Choose from different axle & wheel combinations, including single or bogie axle Landcruier wheels or big single tractor tyres.

**Pump:** PTO driven Bertolini 3 piston diaphragm pump. A hydraulically driven Hypro pump is available. Smooth running pump eliminates the need for pulsation dampeners. Also works well with controllers unlike other twin piston diaphragm pumps which can run quite rough & 'hammer' the liquid through the lines.

**Tank:** Low profile, UV stabilised polyethylene tank with large sump for complete drainage & a smooth interior for easy decontamination, 3/4" sight tube. 2" remote fast drain, 1 1/2" top mounted bottom fill with your choice of camlock, dedicated venturi pressure agitator as well as bypass agitation.

**Boom:** Manual Fold - The best booms on the market, Hayes 10m, 12m or 15m sidefold self-leveling boom with hydraulic lift as standard. Hydraulic Fold - Stoll's own booms are also available with hydraulic fold, in 12m to 18m sizes.

**Nozzles:** TeeJet non-drip nozzle bodies that are mounted behind the boom for complete protection together with Teejet nozzles of your choice.

**Controls:** ARAG electric controls are fitted as standard with motorized plunger valves (not solenoid), electric regulating valve & pressure relief valve all in the one neat manifold. Valves are mounted on the boom rather than at the front of the sprayer to cut down on unnecessary lengths of hose for easier decontamination, neater installation & quicker on/off time of booms. TeeJet 844e or Topcon Eagle Rate controllers are available as an option.

**Foam Marker:** High quality 30lt or 100lt double sided marking system. A Thomas 12 volt compressor is at the heart of the system & coupled with our end-of-line generators it makes excellent, reliable foam.

**GPS:** The Trimble EzGuide 500 and Trimble EzBoom system can also be fitted as an option. This eliminates the need for a rate controller and foam marker and gives you a fantastic set up. The GPS becomes your rate controller and the EzBoom gives you auto boom switching, meaning the sections of your boom will shut off as you go over applied areas.

**Flush Tank:** 100lt or 200lt flush tank plumbed to enable flushing of the pump & boom. Hand wash tap also fitted.

**Filtration:** Three stage filtration with a large capacity ARAG 316 1 1/2" suction filter, 2 x 1 1/4" in-line filters and TeeJet nozzle filters - all as standard.

**Chemical Fill:** Chemical suction probe or induction hopper provide easy, clean chemical transfer from the chemical drum to the tank.

**Finish:** Trailer and boom are sandblasted, primed and powdercoated for excellent chemical resistance and a hard, rich finish.

**With prices starting from \$15,200.00 + GST the GT Range offers excellent value for money.**

The GT Range can be fitted with the following options: Hydraulic Fold, Large single wheels, TeeJet OR Topcon Automatic Rate Controller, TRIMBLE GPS Guidance / Rate Control & Auto Boom Switching, The GT range can be customized to suit any application.
